How can I move a layer object? I'm new to flash and am having trouble moving a layer object on my stage. I've created a shape: `var shape:Shape = new Shape(); shape.graphics.drawRect(new Rectangle(0,0,1500,1500)); addChild(shape);`

How do I move it around the stage? A: You need to assign your stage to the shape. Your shape is only a graphical element and is not associated with a stage instance. `var`

`shape:Shape = new Shape(); shape.graphics.drawRect(new Rectangle(0,0,1500,1500)); shape.x = 100; shape.y = 100; addChild(shape);` This means

that by calling `shape.x` you are telling the shape to move 100 pixels to the right. Q: clojure: how to parse from keyset to values I have a question about how to parse from a set of keys to the values they're associated with, e.g. (`{:age 8 :name "kevin" :loves-children true}`) How can I get a function / map that will return me kevin? Thanks. A: Here's a function that looks at the keys and prints all the values that map to a key. `(defn`

key.rar.bras) is: \mathbb{Z} Noetherian \mathbb{Z}
Artinian \mathbb{Z} Von Neumann regular ring
 \mathbb{Z} Cohen Macaulay Noetherian domain
 \mathbb{Z} Integral domain A: I do not understand
your use of the terms "structural" and
"coloring". It is often problematic to interpret a
structural property of a ring (e.g. module,
commutative algebra, etc.) in algebraic terms,
and vice versa. By a "homological coloring", I
presume you refer to the "classical" coloring of
a ring as in (1.2) of Serre's book (it is also a
good reference) but in your setting you do not
have a map from the set of homomorphisms,
so you would be speaking of coloring
